“Bad Wind—Where it Comes From”

**Elizabeth Chiblow August 1st 2012*

1 of 2 MFN Air Monitors

UP-DATE

24 hour air samples are taken from various locations within MFN on an average of **4 times per month**—to date there have been no instances of where the levels of **Uranium** in the air have surpassed *Ontario Regulation Standards* nor comparable to other agencies' standards such as the *World Health Organizations'* (WHO) nor of Americas' *Environmental Protection Agency* (EPA).

The levels acquired from our air sampling program are a fraction of what is 'allowable'. And Cameco assures that they are maintaining levels "as low as reasonably achievable" (ALARA).
